SUMMARY

Analytics professional and applied AI builder with an M.S. in Business Analytics and four years of experience turning data into decisions and decisions into shipped products. Strong in SQL, Python, statistical modeling, and BI (Tableau, Power BI, Streamlit), with a public portfolio of AI and ML systems spanning multi-agent orchestration, predictive forecasting on 1M+ rows, REST API-driven analytics tools, healthcare policy AI decoding, and a Microsoft hackathon email security agent built on Azure AI Foundry and Microsoft Graph. Best Student Research Paper award, national-level competition. I build systems a non-technical operator can use without a manual, tied to outcomes a CFO would recognize.

SKILLS

AI & ML: Multi-Agent Systems, Agentic AI, GenAI, LLMs, NLP, ANNs, CNNs, RNNs, Computer Vision, RAG, HITL, Prompt Engineering (Reasoning Models), MCP, LangChain, LangGraph, Flowise, LangFlow, Google Agent Developer Kit (ADK), Vertex AI Agent Designer, Dialogflow-CX, MLOps, PyTorch, TensorFlow, HuggingFace Transformers, XGBoost, LSTM, LightGBM, KNN, Clustering, Cross Validation, PCA, Data Mining, Semantic Analysis, Sentiment Analysis, Text Mining, full CRISP-DM model development, Serverless and Online API ML systems, Phishing Detection and Email Threat Classification.

AI Tools & Models: Claude (Pro, Cowork, Code, MCP, Skills, Connectors), Gemini (Pro, Colab, AI Studio, Firebase, NotebookLM), ChatGPT (Codex, Custom GPTs), Microsoft Copilot, GitHub Copilot, Cursor, Embeddings (OpenAI, Ollama, HuggingFace, Upstash), Meta, AI-assisted software development.

Cloud & DevOps: AWS (Solutions Architect Associate in progress), Google Cloud Platform (GCP), Azure (Cloud, AI Foundry, Serverless Deployments, Microsoft Graph API, OAuth 2.0 / MSAL), Vertex AI, Looker, OpenRouter, Docker, Kubernetes, serverless and online server models, REST and RESTful APIs, FastAPI, ETL and CI/CD pipelines, Git, GitHub, VS Code (Expo for iOS apps), Android Studio.

Programming Languages: Python, JavaScript, Java, React, Angular, Node.js (npm), C#, R, Rust, SQL, JSON, .NET MAUI. Strong on data structures, algorithms, debugging, design patterns, and testing.

Data & Analytics: Advanced SQL (multi-source), Excel (VBA, pivot tables, power pivots, array functions), Tableau, Power BI, Streamlit, Looker, IBM SPSS 25, Figma, Databricks, SQL Server, MongoDB, PostgreSQL (Supabase), customer segmentation, A/B and test-and-learn experimentation, behavioral analytics, statistical analysis, Salesforce (CRM, Analytics, HubSpot, Lightning, Admin).

Business & Strategy: Competitive Intelligence, Financial Services, Healthcare Policy Analytics, Real Estate, Market Research, Sales Strategy, Marketing Analytics, Storytelling, Agile, Cross-functional Leadership, Stakeholder Management, Content Management.

WORK EXPERIENCE

Channel Partner & Analytics Advisor

Rebridz Realtors LLP, Hyderabad, India | Aug 2020 to Nov 2023

- Owned end-to-end SQL and Python data pipelines across Salesforce, Databricks, and SQL Server; analytics drove portfolio sales decisions and capital allocations across the firm's deal flow.
- Built BI dashboards and ran customer segmentation and test-and-learn analyses; sustained a 17% client retention rate and presented recommendations directly to non-technical stakeholders.
- Executed spatial data evaluation, proximity analysis, and trend surveys to surface white-space opportunities and reactivate dormant client segments.

Market Development, Cross Program Analyst

Deloitte, Hyderabad, India | May 2019 to Aug 2020

- Built Tableau and Salesforce dashboards and competitive intelligence supporting C-suite tracking across 50+ enterprise client accounts in an Agile environment; earned 2x corporate Spot Awards.
- Translated complex data into clear, actionable recommendations for non-technical C-suite stakeholders.

Internships: ICICI Direct, Financial Advising and Customer Relationships, Hyderabad (May to Jul 2018). Alexa Data Services (Amazon), Data Associate, Transcription (May to Aug 2017).

RESEARCH & PUBLICATION

Rethinking Reproducibility: A Study on IoT-based Malware Detection, UNT (Research Fellow, May to Jul 2025). Poster presented at ABIS/FBD 2026. Trained ANNs for malware classification using PyTorch and TensorFlow. **Best Student Research Paper, national-level competition.**

EDUCATION

University of North Texas, Denton, TX. **M.S., Business Analytics;** conferral May 2026.

Bhavan's Vivekananda Degree College, Hyderabad, India. **B.S., Statistics.**

Siva Sivani Institute of Management, Hyderabad, India. **PGDM, Marketing, Operations & Analytics.**

PROJECTS

- **PolicyIQ** (Python, Streamlit, Claude, FastAPI): Healthcare policy AI decoding platform built for Cotiviti submission (Topic 3, Content Management in Healthcare). Two modes: Payer Policy Decoder, translating complex insurance policy language into plain-language guidance, and Claim Denial Risk Scorer, flagging claims likely to be denied before submission using AI-driven pattern analysis.
- **EmailScan AI** (Python, FastAPI, Microsoft Graph API, Azure AI Foundry, Phi-4 Reasoning, OAuth 2.0 / MSAL): Enterprise email security agent (Microsoft Agents League Hackathon 2026). Connects to Outlook via Graph API, classifies phishing and suspicious emails with an explainable indicator-based scoring engine, cross-references folder placement, extracts suspicious links from full email bodies, and routes them to Phi-4 on Azure AI Foundry for step-by-step domain reasoning with a Safe / Suspicious / Phishing verdict. Action layer includes Report, Delete, and RFC 8058 one-click Unsubscribe with safety gating.
- **Filterflow AI** (Python, GCP, Google Agent Developer Kit, Docker): Open-source multi-agent orchestration framework converting conversational workflows into containerized, deployable data pipelines.
- **Legacy Code Modernization Pipeline** (Python, LangChain, LangGraph): Three-agent system that ingests, maps, documents, and modernizes legacy codebases while preserving original logic.
- **Localyst AI** (Python, PyTorch, TensorFlow, HuggingFace): Offline ETL pipeline with neural-network agentic code for structured extraction from files exceeding 20MB.
- **Inventory Demand Forecaster, RetailLens (MS Capstone)** (Python, PyQt6, XGBoost, LightGBM): Forecasting platform on UCI Online Retail II (1M+ rows) with per-SKU model routing; final XGBoost MAE 44.80.
- **Insurance Risk Analyzer** (Python, PyQt6, ReportLab, matplotlib): Risk engine with live Census and FRED REST API integrations, exposure scoring, KPI dashboards, and multi-page PDF reporting.
- **Business Viability Analyzer** (Python, Data.gov): Predictive analytics platform automating market sizing, competitive mapping, and risk profiling across 13+ industries in under 60 seconds.
- **Profash** (Adobe Express SDK, JavaScript): Custom AI-powered add-on integrating generative models into a third-party developer surface.
- **NU-Clear x UN-Clear** (Simulation): Live geopolitical consequence simulator modeling international fallout from diplomacy, sanctions, and tactical vectors.

COMMERCIAL VALUE I CREATE

PolicyIQ demonstrates AI applied to a genuinely high-friction healthcare problem: translating dense payer policy language and flagging claim denial risk before submission, built with Streamlit for rapid, non-technical-friendly deployment. EmailScan AI demonstrates enterprise security agent architecture on Microsoft's stack, reducing inbox threat triage from minutes to seconds. Filterflow AI and the Legacy Code Modernization Pipeline automate knowledge work and technical-debt cleanup that consume engineering headcount. Localyst AI eliminates cloud egress on regulated extraction workflows. The Inventory Demand Forecaster drives per-SKU working-capital optimization on 1M+ transactions, the Insurance Risk Analyzer cuts diligence cycles from weeks to hours, and the Business Viability Analyzer replaces weeks of consulting across 13+ industries with a 60-second analysis. At Rebridz, analytics drove portfolio sales with a 17% client retention rate. At Deloitte, dashboards supported C-suite tracking across 50+ enterprise accounts. Pattern: software a non-technical operator can use without a manual, tied to outcomes a CFO would recognize.

CERTIFICATIONS

Cloud: AWS Certified Solutions Architect, Associate (in progress, expected before July 2026); Google Cloud Platform; Google Application Development; Google Generative AI.

Other: IBM Machine Learning in Python; IBM SPSS 25.

AWARDS

- Deloitte: Spot Award x2 (DU Strategy & Competitive Landscape); Firm-Wide Award (Top 7 Inclusive Persons of Deloitte).
- Best Student Research Paper Award, National-level competition, Dr. D. Y. Patil Institute of Management Studies.
